

Series 10-0588

Universal Cleaner for Plastics

This universal cleaner is ideally suitable for residue-free removing of hydrophilic (“water-loving”) contaminations like migration substances of protection foils, adhesive- or foil residues on various plastics. Suitability of stress-cracking sensitive substrates are subject to pre-tests, but are usually not a problem. It is however important that while cleaning with a cloth (wiping), the latter will quickly be saturated with the removed residues and thus the substrate to be cleaned will again be contaminated. Therefore: the cleaning cloth must be changed very often or disposable wipes shall be used.
